

Cockroach Treatment

Internal

- Dust roof void, electrical motors etc.
- Gel to kitchen and bathroom cupboards.
- Aerosol spray if required.
- Residual spray may be used.

External Spray

- House perimeter including eaves, fascia, walls, window and door frames etc.
- **All other potential harbourage areas.**

Note: You can choose to have an external, internal or complete cockroach treatment

Prior to Treatment

Internal Preparation

- Kitchen cupboards and drawers should be emptied of all cutlery and crockery and wiped down prior to treatment. Place all items on a table for now and cover if desired.
- Remove all rubbish from the areas that are to be treated.
- Clean all excess grease and food crumbs from stove top and benches.
- Clear all pet bowls, personal belongings and children's toys off the floor.
- Switch off and cover aerated fish tanks prior to treatment and leave off for 4 hours after.
- If carpet edges and skirting are to be sprayed please move all items (where physically possible) away from room edges, pick up all children and pet toys etc.
- If carpet edges and skirting are to be sprayed please move all items (where physically possible) away from room edges, pick up all children and pet toys etc.

External Preparation

- All children's toys to be brought inside or put away.
- All pet bowls, bedding and toys to be put away or brought inside.
- Cover fish ponds and turn off pumps during treatment and leave off for 3 hours afterwards.
- Pet birds to be brought inside where possible or covered during treatment.
- All pets to be brought inside including pet where possible or covered during treatment.
- Cover or move edible plants and herbs.
- Remove all washing from clothes line.
- Close all windows and doors.

Note: The better you prepare your property, the better the result you can expect to see.

During Treatment

- Children and pets to remain inside during external spray.

On Completion of Treatment

- All Kitchen items can be returned to their places about 3 hours after the treatment or until chemical has completely dried. **–DO NOT WIPE OUT CUPBOARDS AFTER THE TREATMENT.**
- There will be water marks left on surfaces i.e. walls and windows, these need to remain there for 3-4 weeks also. Windows can be cleaned a few days after treatment however only with a spray bottle and cloth (*to be disposed of afterwards*).
- People and pets are to remain away from internally treated areas for 3 hours or until chemical has completely dried following treatment and externally treated areas for up to 3 hours or until chemical has completely dried, depending on weather conditions. (*Our technician will advise you of the required time on the day of service*).
- Ensure all retic is switched off for 24 hours after treatment is completed.
- NOT ALL PESTS DIE OVERNIGHT, IT CAN TAKE UP TO 2 WEEKS FOR THE FULL TREATMENT RESULTS TO BE EVIDENT, FOR THIS REASON WARRANTY VISITS AREN'T BOOKED PRIOR WITHIN THE INITIAL 2 WEEKS.

Approximate Treatment time is 1 hour (*This may vary*)

Pricing – Please contact us with your specific requirements.

Cockroach Prevention Tips

- ★ Dry up any standing water around sinks, tubs, and toilets. Repair leaking taps and drains. Cockroaches can only live a week without water.
 - ★ Clean up straight after any food preparation.
 - ★ Store foods in air tight sealed containers.
- ★ Always Clean your kitchen, including crumbs near the stove, microwave, and refrigerator.
- ★ Vacuum scraps of food from corners and around the cabinet bases. Clean any dropped food immediately. Vacuum and mop floors regularly.
 - ★ Garbage should be removed daily and bins cleaned.
 - ★ Wipe down cupboard insides and drawers with soap and water.
- ★ Do not leave dirty dishes lying around. Always clean and put away after use.
